(57) **Abrégé/Abstract:**

In one embodiment, a system is described in which a graphical user interface (GUI) is rendered on each system users' communication device. The GUI produces a content selection function for selecting user content for sharing, and a sharing platform selection function for selecting one or more sharing platforms. The system further comprises a digital content integrator communicatively linked to the user interface to gain access to the selected user content in response to the content selection function, the integrator having access to stored external content distinct from user content. The integrator integrates the external content with the selected user content to output integrated content. The system further comprises a communication interface communicatively linked to the integrator and selectively operable to interface with the distinct content sharing platforms to relay the integrated content to the selected sharing platforms on behalf of system users as originating therefrom.
